5x USAF KC-10s out of Ellsworth AFB, SD. This is the same pattern (and some of the same aircraft) as we saw 3 days ago.

On Tuesday, according to our algorithm & by using the Julian Calendar, May 6 -16 would be the 10 days of darkness.

I never throw out dates, this is just our calculation.

**April 23rd is the 113 day of the year**  
**May 3rd is the 123 day of the year**  
**123 - 113 = 10**

**Convert 4/23 & 5/3 on Julian Calendar = May 6th thru May 16th**  
**10 DAYS OF DARKNESS**

**13 Days Behind Today**

Currently (1901–2009), the Julian calendar is 13 days behind the Gregorian calendar.

Today's Gregorian calendar uses a more accurate leap-year formula, making it far more accurate than the Julian. However, it is not perfect either. Compared to the tropical year, it is off by one day every 3236 years.
